DETAILED ACTION

1. This application has been examined. The claims 1-4, 7-9, 12-16, 18-22, 25-29 and 31-32 are allowed.

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance: The present invention is directed to a display control device or display control method comprising a controller for providing a mode-control signal; a scaling engine for producing a first interface signal; a timing controller for converting said first interface signal into a second interface signal; a selector for selecting either said first interface signal or said second interface signal to serve as a reference signal for output according to said mode-control signal. The combination of the closest prior art of Valmiki et al. (US 6,661,422), Ha (US 2002/0113762), Cui et al. (US 2004/0160435) and prior art of fig. 5 submitted by applicant showed a similar invention, however, they fail to teach that wherein, when said mode-control signal is under a first mode, said output signal is substantially said first interface signal; when said mode-control signal is under a second mode, said output signal is substantially said second interface signal; when said mode-control signal is under a third mode, said interface circuit converts said first interface signal to a third interface signal to serve as said output signal thereof; and when said mode-control signal is under a fourth mode, said interface circuit converts said second interface signal into a fourth interface signal to serve as said output as claims 1 and 3; or an interface circuit either by passing said selected interface signal to serve as said output image signal or converting said selected interface signal

Art Unit: 2629

into a differential interface signal to serve as said output image signal in response to said mode signal; and a phase-locked loop for providing a clock signal to said interface circuit, wherein said clock signal has a first frequency when said selected interface signal is bypassed to serve as said output image signal and has a second frequency when said differential interface signal is provided to serve as said output image signal, wherein said second frequency is greater than said first frequency as claims 7, 16, 20 and 29.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
